said divalent metal salt of said acrylic acid compound per unit of said acrylic acid compound
and in the range of from about 0 to about 2.25 units of said monovalent metal salt of said acrylic
acid compound per unit of said acrylic acid compound, and
said acrylic acid compound is represented by the formula CH ₂ =CR-COOH and R is
hydrogen or a methyl group[.]
and further wherein
said gel is stable at temperatures up to about 450 degrees Fahrenheit.
B. Please cancel claim 3 without prejudice.
C. In claim 4 please delete "claim 3" and insert thereforeclaim 2
D. In claim 5 please delete "claim 3" and insert thereforclaim 2
E. Please amend claim 12 as follows:
12. A method of making a gel which is not water soluble comprised of making a water
soluble polymer comprising:
forming a polymer precursor by mixing an acrylic acid compound with a material
selected from the group consisting of a divalent metal compound, a monovalent metal
compound and mixtures thereof,
combining a polymerization initiator with said precursor, [and]
permitting said precursor to form said water soluble polymer[;] and
combining said water soluble polymer with a cross linking agent to form said gel;
wherein
